

88 DU

CERAMIC | Forced Air Marine Stove

The Greenboost burner burns renewable fossil-free diesel cleanly and energy-efficiently, as well as fossil based fuel.

Exhaust gas is safely expelled outside keeping the indoor air clean and odorless.

Fully enclosed laminar burning process ensures a quiet sound level and dries the indoor air.

Brushless blower motors have a very long life-cycle, supporting reliably long service intervals.

Feeding fuel directly from the main tank of the vessel saves space and eliminates the need for a separate tank.

Durable Finnish design and manufacturing keep your Wallas running through tough weather conditions.

State-of-the-art flat facet ground surface.

Laminar combustion is a safe burning process with no exposed flame.

Unlike propane stoves, diesel stoves do not require gas inspections.

Left plate is for boiling - right side for simmering.
